

Sai Krishna Bykani

QA Automation, API & Performance Test Engineer

Hyderabad | +91 8522807300 | saibykani07@gmail.com

PROFESSIONAL SUMMARY

Software Development Engineer in Test (SDET) with 3 years of experience in test automation, API testing, performance testing, and backend validation for payment, UPI, and transaction-driven systems. Strong expertise in Java, Selenium WebDriver, Cucumber BDD, REST Assured, Postman, Newman CLI, and Apache JMeter. Proven experience in end-to-end test automation, API integration testing, log analysis, and defect lifecycle management. Adept at working in Agile/Scrum environments, collaborating with developers, and ensuring release quality, system stability, and production readiness.

PROFESSIONAL EXPERIENCE

Software Development Engineer in Test (SDET)

Toucan Payments Private Limited | July 2023 – Present

- Worked on functional, regression, integration, and end-to-end testing for web and backend payment applications.
- Developed and maintained UI automation scripts using Selenium WebDriver, Java, Cucumber (BDD), and TestNG.
- Automated critical payment and transaction workflows, improving regression coverage and execution efficiency.
- Built and executed API automation tests using REST Assured, Postman, and Newman, validating request/response payloads and business rules.
- Performed performance and load testing using Apache JMeter for UPI and card transaction flows.
- Configured and executed distributed JMeter master-slave setup for concurrency and scalability testing.
- Conducted backend data validation using MySQL, Azure SQL, and MongoDB to ensure data consistency across UI, API, and backend systems.
- Analyzed application logs and Grafana dashboards to identify performance issues and SLA risks.
- Supported CI/CD pipelines by integrating automation suites with Jenkins for scheduled and release-based execution.
- Logged, tracked, and managed defects using Jira, Azure DevOps, and Spira, including root cause analysis and fix validation.

PROJECTS

- **Payment Gateway Automation:** Automated UI and API test cases for onboarding and transaction flows using Selenium, Cucumber, and REST Assured, ensuring end-to-end validation.
- **API Automation Framework:** Developed reusable REST Assured components and maintained Postman collections with Newman scheduler for continuous API regression testing.
- **Performance Testing:** Designed and executed Apache JMeter test plans and ran master-slave distributed tests to analyze throughput, latency, and error rates under peak load.
- **Backend Validation & Monitoring:** Performed SQL and MongoDB validation and analyzed Grafana dashboards for system stability and SLA monitoring.

CORE SKILLS

- **Programming & Automation:** Java (Test Automation), Selenium WebDriver, Cucumber (BDD), TestNG, Maven, Page Object Model (POM), Data-Driven Testing

- **API & Integration Testing:** REST Assured, Postman, Newman (Postman CLI), REST APIs, JSON Validation, XML Validation, API Automation Frameworks, API Workflow Validation, Transaction Validation
- **Performance & Load Testing:** Apache JMeter, Load Testing, Stress Testing, Spike Testing, Endurance Testing, Distributed JMeter (Master–Slave), Performance Bottleneck Analysis
- **Backend & Database Validation:** MongoDB, Backend Data Validation, Data Reconciliation, Log Analysis
- **CI/CD, DevOps & Monitoring:** Jenkins, GitHub, Gitea, Grafana Monitoring, SLA Validation
- **Defect & Test Management:** Jira, Spira, Defect Tracking, Root Cause Analysis (RCA), Test Planning, Test Case Design, Test Execution, Test Reporting
- **Methodologies:** Agile, Scrum, SDLC, STLC

EDUCATION

Teegala Krishna Reddy Engineering College, Hyderabad | Oct 2020 – July 2023
B.Tech, Electrical and Electronics Engineering

ACHIEVEMENTS

- **Recognised for automation testing and API validation contributions that improved regression stability by ~40% and increased automated test coverage across critical payment flows.**
- **Played a key role in performance and load testing of high-volume payment and UPI transaction flows using Apache JMeter, validating system behaviour under 2x–3x peak load conditions.**
- **Supported successful release sign-offs by ensuring end-to-end test coverage across UI automation, API testing, backend validation, and integration testing, reducing post-release defects and rework.**
